# ULTIMATE XL series Brushless Micromotor

## Powerful and Comfortable

The ULTIMATE XL Series offers a choice of four control units, according to space and user requirements. All functions are controlled by NSK's microcomputer which maintains smooth starting and stopping ensuring excellence in overall operability.

### 180° vector motor control

Ripple-free smooth rotation with 180° vector control system. Powerful and stable torque across the entire speed range.

### Low noise, low vibration

Minimal vibration, and noise from hermetically shielded micromotor unit. Approximately 30% increased chuck strength enables you to work on a wider variety of materials.

# ULTIMATE XL

Bench Top System **BRUSHLESS**

### Features

- Speed of 1,000-50,000 min<sup>-1</sup>
- Digital speed display
- Maintenance mode setting
- Auto cruise function
- Error code display function

\*Not applicable to connect with an air turbine handpiece

# VOLVERE i7 Coreless Micromotor

## Compact & Smart

A User-Friendly Micromotor for Any Dental Laboratory

The VOLVERE i7 is another advance in NSK's quest to provide dental technicians access to its globally renowned dental laboratory engines. The stylish VOLVERE i7 delivers a compact, advanced design, all essential features and excellent value for money.

### Light and compact to fit into the smallest space

The unit is just 69 mm wide and weighs only 930 g. It can safely be placed on workbench shelves to save space on the worktop.

### Microcomputer control

Knowledge gained from many years of experience and NSK's cutting edge dental laboratory technologies are incorporated into a high performance microcomputer with its CPU. This microcomputer provides excellent control and constantly monitors the motion of the motor to provide smooth starting and stopping. If changing rotation direction while the motor is running, the microcomputer waits and checks that the motor has completely stopped before changing the rotation direction. The motor starts and stops without any jolts and runs extremely smoothly to maximize user comfort.

## Standard Micromotor

Speed:  
1,000-35,000 min<sup>-1</sup>

## E-type

Speed:  
1,000-35,000 min<sup>-1</sup>

### Ergonomic handpiece

This handpiece incorporates the latest ergonomics, just like all NSK models. The grip is easy to hold and minimises fatigue, enhancing the precision of dental laboratory work.

### High torque, high efficiency coreless motor

The micromotor in the VOLVERE i7 handpiece has no core and generates less rotary momentum. This contributes to the controllability of the rotation speed and reduces uneven rotation. In addition, this motor has higher power efficiency compared to a conventional motor and can maintain constant speed even at high speeds.

### Special dust proof mechanism

The handpiece has a patented built-in dust-proof system to prevent the ingress of debris into the bearings.
